SUMMARY

DevOps-focused engineer with 2 years of experience building and deploying production web applications on AWS. Containerized workloads on Amazon EKS and EC2 with CI/CD via Jenkins and GitHub Actions, infrastructure as code in Terraform, and end-to-end production support in a regulated (21 CFR Part 11) environment. Full-stack background in React, Node.js, and Express.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EKS, EC2, ECR, S3, CloudFront, Cognito, Pinpoint, SSM Parameter Store, IAM, CloudWatch), Kubernetes, Docker, Docker Compose, Terraform (IaC), Jenkins, GitHub Actions, CI/CD, Linux, Bash
Backend: Node.js, Express.js, RESTful API Development, JWT, OAuth
Frontend: React (Hooks, Context API, Redux), Angular (Components, Services, RxJS), HTML5, CSS3, Tailwind CSS
Languages: JavaScript (ES6+), TypeScript, Python, C#, SQL
Databases: MongoDB (Mongoose), MySQL, PostgreSQL
Tools: Git, GitHub, Postman, Zoho CRM, Agile/Scrum
Spoken: English, Hindi, Gujarati, Marathi

EXPERIENCE

•Maharshi Systems Private Limited

Software Engineer — Full-Stack & DevOps

Oct 2024 – Present

Ahmedabad, Gujarat

- Built and shipped a 21 CFR Part 11-compliant calibration portal (React frontend, Express backend) serving 100+ users and tracking calibration for ~2,000 devices, deployed on AWS using Amazon EKS, S3, and CloudFront.
- Designed and owned CI/CD pipelines in Jenkins and GitHub Actions, replacing manual deployments with automated containerized releases shipped several times a month across development and production.
- Implemented authentication and role-based access control (RBAC) with AWS Cognito, customer notifications via AWS Pinpoint, and secrets and environment configuration management through SSM Parameter Store.
- Developed and deployed the backend for an iOS calibration application delivering sensor calibration certificates to customers.
- Migrated a core utility from C# to JavaScript and independently deployed it across development and production environments, consolidating the service onto the Node.js stack.
- Own end-to-end production support and incident resolution for the company's SaaS product, handling customer-reported issues from triage through root cause analysis to fix and release.

•Meghmani Organics Limited

Web Developer

Mar 2024 – Aug 2024

Ahmedabad, Gujarat

- Maintained the corporate WordPress website (content updates, page builds, fixes) and developed features in JavaScript for an internal HR application used across the organization.

PROJECTS

•Éclat — 3D AI Fragrance E-Commerce Platform [repo]

React, TypeScript, Three.js (react-three-fiber), Express, Supabase, Docker, Jenkins, Terraform, AWS

- Built an interactive 3D storefront with AI-assisted scent recommendations, served by an Express application server handling API routing, SPA fallback, and immutable asset caching; integrated Razorpay payments with HMAC-verified webhooks.
- Containerized the application with a multi-stage Alpine Docker build and reduced the production image from 497 MB to 258 MB (48%) by reclassifying client-only 3D dependencies as build-time, keeping it within ECR free-tier limits.
- Authored infrastructure as code in Terraform and a Jenkins CI/CD pipeline deploying to AWS EC2 from ECR via an IAM instance role; deployments pin image tags to commit SHAs and roll back automatically on a failed health check.

•Travel Management Backend

Node.js, Express, MongoDB, Redis, Docker, AWS

- Backend for users, trips, bookings, payments, and reviews with JWT auth and RBAC; containerized with Docker, deployed on AWS, Redis caching, Stripe payments.

•Healthcare Chatbot — RAG Medical Q&A Assistant [repo]

Python, Flask, React, Vite — two-person project; owned the API and frontend

- Built the Flask API and React frontend for a retrieval-augmented healthcare assistant, exposing a collaborator's RAG pipeline (ChromaDB, Ollama) through a streaming chat endpoint with conversation memory and source attribution.

EDUCATION

•ITM (SLS) Baroda University

Bachelor of Technology, Computer Science

Aug 2020 – Aug 2024

Vadodara, Gujarat
